This publication was developed by the Information Sharing and Analysis Organization Standards Organization (ISAO SO) with representatives from the private, professional, and government communities in an ongoing effort to produce a unified voluntary set of guidelines and guidance for information sharing. The ISAO SO and the Working Group leadership are listed below.

### ***ISAO Standards Organization***

Dr. Gregory B. White

*ISAO SO—Executive Director*

Richard Lipsey,  
*ISAO SO—Deputy Director*

Brian Engle  
*Executive Director*  
*Retail Cyber Intelligence Sharing Center*

### ***Working Group Four—Privacy and Security***

David Turetsky  
*Partner*  
*Akin Gump Strauss Hauer & Feld LLP*

Carl Anderson  
*Vice President*  
*Van Scoyoc Associates*

Norma Krayem  
*Senior Policy Advisor*  
*Holland and Knight LLP*

The ISAO SO leadership would also like to acknowledge those individuals who contributed significantly in the development of these guidelines:

## Table of Contents

1	Preface .....	2
2	Frequently Asked Questions: .....	2
2.1	What benefit can information sharing about cyber-threat vectors, hacking efforts, company response plans and outcomes produce for my organization? .....	2
2.2	What general risks will information sharing present and how can they be best anticipated and avoided if my organization participates? .....	3
2.3	If we participate, what are the advantages of sharing with other non-governmental entities (including with an ISAO), or with the government? .....	4
2.4	What policies and procedures should my organization have in place to comply with the Cybersecurity Information Sharing Act of 2015 (“CISA”)? .....	4
2.5	Does CISA provide complete liability protection for information shared through an ISAO? .....	5
2.6	What privacy and security policies should my organization have in place before it begins to share information with an ISAO? .....	6
2.7	If my organization chooses to participate in cyber threat information sharing, should the exchange of information be done through an automated electronic system or by personal contact (or both)? .....	7
2.8	Are all ISAOs the same? .....	8

## 1 PREFACE

Broadening participation in voluntary information sharing is an important goal, the success of which will fuel the creation of an increasing number of Information Sharing and Analysis Organizations (ISAOs) across a wide range of corporate, institutional and governmental sectors. While information sharing had been occurring for many years, the Cybersecurity Act of 2015 (Pub. L. No. 114-113) (CISA) was intended to encourage participation by even more entities by adding certain express liability protections that apply in several certain circumstances. As such proliferation continues, it likely will be organizational general counsel who will be called upon to recommend to their superiors whether to participate in such an effort.

With the growth of the ISAO movement, it is possible that joint private/public information exchange as contemplated under CISA will result in expanded liability protection and government policy that favors cooperation over an enforcement mentality.

To aid in that decision making, we have set forth a compilation of frequently asked questions and related guidance that might shed light on evaluating the potential risks and rewards of information sharing and the development of policies and procedures to succeed in it. We do not pretend that the listing of either is exhaustive, and nothing contained therein should be considered to contain legal advice. That is the ultimate prerogative of the in-house and outside counsel of each organization. And while this memorandum is targeted at general counsels, we hope that it also might be useful to others who contribute to decisions about cyber-threat information sharing and participation in ISAOs.

## 2 FREQUENTLY ASKED QUESTIONS:

### 2.1 WHAT BENEFIT CAN INFORMATION SHARING ABOUT CYBER-THREAT VECTORS, HACKING EFFORTS, COMPANY RESPONSE PLANS AND OUTCOMES PRODUCE FOR MY ORGANIZATION?

- Effectively done, sharing can provide information, otherwise unavailable to a given entity, that might prevent or at least identify compromises, reveal vulnerabilities—potentially prior to exploitation, and help identify victims for notification purposes where information reveals compromised customer

38 IP addresses, and promote useful system modifications, threat reduction and  
39 cost savings.

40

41 • It also can be a material contribution to protecting the nation’s critical infra-  
42 structure.

43

44 • It also should be noted that most of the value of sharing can be accomplished  
45 without the inclusion of personal information (PII) removing many of the  
46 concerns organizations may have with sharing information.

47

## 48 **2.2 WHAT GENERAL RISKS WILL INFORMATION SHARING** 49 **PRESENT AND HOW CAN THEY BE BEST ANTICIPATED** 50 **AND AVOIDED IF MY ORGANIZATION PARTICIPATES?**

51

52 • While there always is some possibility of an increase in risk when an organi-  
53 zation no longer has direct control over a piece of sensitive information that  
54 has been shared outside its walls, that quantum of risk should be weighed  
55 against the benefits that sharing can provide to your organization especially  
56 when you have taken steps to mitigate compromise. Operating in a trusted  
57 environment, maximizing automated sharing where possible, and providing  
58 coordinated privacy and security training to reduce the possibility of human  
59 error are all mitigating factors counsels should carefully consider in conjunc-  
60 tion with sharing efforts.

61

62 • To the extent that counsel is concerned with potential reputation risk in the  
63 context of sharing, note that ISAO protocols generally allow information  
64 providers to affect or control the extent of distribution, identification, etc.  
65 Some also provide tiers based upon levels of trust that can limit sharing  
66 based upon knowledge and experience with recipients.

67

68 • General or outside counsels should analyze any existing insurance policies to  
69 determine any positive or negative effect on coverage and whether risk shar-  
70 ing might be considered useful in, or otherwise affect, policy underwriting.

71 Organizations must answer whether entering a sharing arrangement may  
72 mitigate existing risks, or present new risks.  
73

74 **2.3 IF WE PARTICIPATE, WHAT ARE THE ADVANTAGES OF**  
75 **SHARING WITH OTHER NON-GOVERNMENTAL ENTITIES**  
76 **(INCLUDING WITH AN ISAO), OR WITH THE**  
77 **GOVERNMENT?**

- 78
- 79 • The answer to this question is situational. Broader sharing could increase  
80 the benefits to your organization because of the advantages that multiple  
81 sources of information, defense mechanisms, *etc.*, provide. Sharing with an  
82 ISAO also might help your organization leverage resources, such as threat  
83 analytics, to which you are unable to dedicate resources on you own. On  
84 February 13 2015, Executive Order 13691, Promoting Private Sector Cyberse-  
85 curity Information Sharing was signed. EO 13691 encourages the develop-  
86 ment of ISAOs to serve as focal points for cybersecurity collaboration within  
87 the private sector and between the private sector and government. ISAOs  
88 provide a central resource for gathering information on cyber threats to criti-  
89 cal infrastructure and two-way sharing of cyber threat information between  
90 the private and public sector.
  - 91 • If CISA’s pre-requisites are met, CISA’s liability protections apply both to  
92 cyber threat information exchanges between private sector entities including  
93 ISAOs and the government and to cyber threat information exchanges be-  
94 tween private sector entities alone.  
95

96 **2.4 WHAT POLICIES AND PROCEDURES SHOULD MY**  
97 **ORGANIZATION HAVE IN PLACE TO COMPLY WITH THE**  
98 **CYBERSECURITY INFORMATION SHARING ACT OF 2015**  
99 **(“CISA”)?**

- 100
- 101 • Compliance with CISA is a legal matter that should be carefully analyzed by  
102 organization counsel. CISA contains various protections designed to encour-  
103 age entities voluntarily to share “cyber threat indicators” and “defensive  
104 measures” with the federal government, state and local governments, and

105 other private entities. Protections include exemption from liability as to shar-  
106 ing, non-waiver of privilege, and protections from FOIA disclosure. CISA  
107 also contemplates redaction of certain information (e.g. personally identifia-  
108 ble information or PII) that is not directly related to a cybersecurity threat  
109 that the entity knows at the time of sharing that identifies specific individu-  
110 als or information personal to them. If intending to share under CISA, organ-  
111 izational counsels should analyze and make a legal determination about  
112 their own information handling policies and procedures to ensure they con-  
113 template and appropriately handle such identifying information prior to  
114 sharing under CISA.<sup>1</sup>

- 115
- 116 • Similarly, a counsel contemplating sharing within an ISAO should consider  
117 whether their organization’s current information policies and procedures  
118 might affect or restrict sharing.
- 119
- 120 • It is incumbent upon an entity and their counsel to review the policies and  
121 processes of an ISAO prior to beginning an information sharing program.  
122

## 123 **2.5 DOES CISA PROVIDE COMPLETE LIABILITY** 124 **PROTECTION FOR INFORMATION SHARED THROUGH** 125 **AN ISAO?**

- 126
- 127 • The liability protections provided for in CISA for sharing in accordance with  
128 the Act are complex and require an independent judgment of organizational  
129 (and/or outside) counsel. In evaluating liability risk and protections for shar-  
130 ing through an ISAO, counsel should consider the following:  
131
  - 132 ○ CISA authorizes non-federal entities to monitor their networks and to  
133 share certain types of information-- – *i.e.*, cyber threat indicators and de-  
134 fensive measures – both with other non-federal entities and the federal  
135 government. It also contains specific liability protection for monitoring

---

<sup>1</sup> For specific guidance on the legal requirements under CISA, please refer to the Cyberse-  
curity Information

Sharing Act of 2015 (CISA) Final Guidance Documents published by the Departments of Jus-  
tice and Department of Homeland Security at <https://www.gpo.gov/fdsys/pkg/FR-2016-06-15/pdf/2016-13742.pdf> and [https://www.us-cert.gov/sites/default/files/ais\\_files/Non-Federal\\_Entity\\_Sharing\\_Guidance\\_%28Sec%20105%28a%29%29.pdf](https://www.us-cert.gov/sites/default/files/ais_files/Non-Federal_Entity_Sharing_Guidance_%28Sec%20105%28a%29%29.pdf) .

- 136 and sharing undertaken in accordance with the Act, which includes par-  
137 ticularities about how the information must be shared when sharing with  
138 the government, and what types of privacy and security reviews must oc-  
139 cur.
- 140
- 141 ○ CISA also contemplates sharing information for a “cybersecurity pur-  
142 pose,” as defined in the statute. Counsel should consider the various con-  
143 texts in which information might be shared, *e.g.*, sharing threat indicators,  
144 response to threats or breaches, and joint readiness exercises, and the po-  
145 tential risks associated with each.
- 146
- 147 ○ Moreover, as a matter of policy, the Federal government has stated that it  
148 will not turn over reported CISA information to enforcement agencies,  
149 and reported information is not made public.
- 150 ○ CISA also addresses the inadvertent disclosure of personally identifiable  
151 information. In any event, counsel must be attentive to have in place  
152 measures to protect confidential information that is to be shared.
- 153
- 154 ○ That said, protections and regulatory limitations in CISA apply to actions  
155 taken under and in accordance with the Act. There currently is no federal  
156 law that can insulate an entity from federal enforcement authorities like  
157 the FTC or Office of Civil Rights of the Department of Health & Human  
158 Services, from State authorities, or from private litigation, in the case of  
159 data breaches of sufficient magnitude that they must be publicly reported.
- 160
- 161 ● Whether and in what circumstances an organization may be able to apply for  
162 legal liability relief under the antiterrorism law, SAFETY Act. The SAFETY  
163 Act provides legal liability protections for providers of anti-terrorism prod-  
164 ucts or services. For more information please consult: <https://www.safetyact.gov/>

- 189
- 190
- 191
- 192
- 193
- To avail oneself of liability protection provided in CISA, sharing must take place in accordance with the Act’s specific provisions. Legal reviews prior to sharing should consider whether an organization has processes in place to ensure certain personally identifying information (“PII”) is reviewed for its relevance to the cybersecurity threat, and removed prior to sharing if necessary. This is especially true for PHI (Protected Health Information) covered by HIPAA, which has requirements beyond CISA’s. HIPAA also offers certain additional protections if data are encrypted. Note that most of the value of sharing can be achieved without including PII. Again, the interpretation of whether an organization’s activities are undertaken “in accordance with the Act” is a legal question for consideration and judgment by organizational counsel.
  - In a more general sense, every organization participating in an ISAO should have a strong cyber security risk management program based on an assessment of its areas of risk and the advice of its counsel. On January 10, 2017, the National Institute of Standards and Technology (“NIST”) released for comment draft revisions to its landmark voluntary framework of cybersecurity standards. If adopted in current or revised form, the NIST standards would at least be useful points of reference for ISAOs, as are various standards issued by state governments, professional organizations, and the multitude of providers of legal, consulting and insurance services that have published about standards

194

195 **2.7 IF MY ORGANIZATION CHOOSES TO PARTICIPATE IN**

196 **CYBER THREAT INFORMATION SHARING, SHOULD THE**

197 **EXCHANGE OF INFORMATION BE DONE THROUGH AN**

198 **AUTOMATED ELECTRONIC SYSTEM OR BY PERSONAL**

199 **CONTACT (OR BOTH)?**

200

- 201
- 202
- 203
- 204
- 205
- While automated means of sharing might have distinct advantages in synthesizing data, assuring speed in the process and enhancing privacy and security, the analytic value of human input should not be short-changed in areas like seeking innovation on prevention and solution of cyber issues, presenting a united front in dealing with counterparts and in dealing effectively with

206 agencies of government. Thus, counsel should consider the relative merits of  
207 each approach.

- 208
- 209 • The DHS Office of Cybersecurity and Communications, National Cybersecu-  
210 rity and Communications Integration Center, and US-CERT are leading ef-  
211 forts to automate and structure operational cybersecurity information sharing  
212 techniques across the globe. Several community-driven technical specifica-  
213 tions that are free for public use have been designed to enable automated in-  
214 formation sharing for cybersecurity situational awareness, real-time network  
215 defense and sophisticated threat analysis. These include:
    - 216 ○ TAXII™, the Trusted Automated eXchange of Indicator Information;
    - 217 ○ STIX™, the Structured Threat Information eXpression; and
    - 218 ○ CybOX™, the Cyber Observable eXpression.

219

## 220 **2.8 ARE ALL ISAOS THE SAME?**

221

222 There is an ever-increasing number of ISAOs and they are not all the same. You  
223 should think about how any given ISAO has provided value in its sector, how it  
224 has exercised control over the information that is shared within it and the ability  
225 of a given member to influence both ISAO policy and dissemination of infor-  
226 mation within the organization.
